

AGRIFOOD

4Future

AgriFood4Future aims to develop vocational training skills and educational programmes that meet the needs of the "agriculture of the future".

This mission can be divided into 3 operational objectives:

- AgriFood4Future will **contribute to the transformation of the agri-food sector** towards digitalisation, decarbonisation and sustainability
- AgriFood4Future will **support the large-scale implementation of new and emerging agriculture practices**, such as climate-smart agriculture, precision agriculture, regenerative and organic practices
- AgriFood4Future will **provide the necessary soft and technical skills, raising awareness, and cultivating an entrepreneurial mind-set** for the “agriculture of the future” for young people and workers in the agri-food sector.

These objectives will be achieved through the various stages of the project. Firstly, an assessment of skills requirements and preparatory work will be carried out. This will be followed by cooperation and networking between the partners, with the aim of creating lasting partnerships. The aim of these partnerships will be to develop innovative education and training programmes in the field of intelligent agriculture and sustainable food systems. Finally, the partners will prepare an action plan to ensure the sustainability of the project.
